

HW1 - Simulation

Kitsakis Georgios

Domain

Video Games (PC & PlayStation)

Description

We simulate a video game rating dataset using 500 real game titles across 5 user segments: PC Gamer, Console Gamer, Cross-Platform Gamer, Budget Gamer, and Casual/Family Gamer. Each user has personal preferences (platform, favorite genres, price limit) that drive binary like/dislike ratings. LDA with anchor words is then used to recover the 5 segments purely from rating patterns.
